

Description

ADM3485 is a RS-485 transceiver with 3.0V~5.5V wide power supply, bus port ESD protection capacity of over 15kV HBM, bus withstand voltage range of $\pm 15V$, half duplex, low power consumption, and fully meet the requirements of TIA / EIA-485 standard.

ADM3485 includes a driver and a receiver, both of which can be enabled and closed independently. When both are disabled, both the driver and the receiver output are high resistance state. ADM3485 has 1/8 load, which allows 256 ADM3485 transceivers to be connected to the same communication bus. It can realize error-free data transmission up to 10Mbps.

ADM3485 has a working voltage range of 3.0~5.5V, and has the functions of fail safe, over temperature protection, current-limiting protection, over-voltage protection, etc.

Features

- Fail-safe Circuitry
- Low Power Consumption
- Up to 256 Transceivers can be Attached to The Bus
- Maximum Transmission Rate: 10Mbps
- ESD: $\geq \pm 15kV$
- SOP8 Package

Applications

- RS-485 Communications
- Level Translators
- Security Equipment
- Industrial Control Equipment
- Watt-hour meter

Pin Description

PIN	SYMBOL	DESCRIPTION
1	RO	Receiver Output. When /RE is low and if $A - B \geq -10\text{mV}$, RO will be high; if $A - B \leq -200\text{mV}$, RO will be low.
2	/RE	Receiver Output Enable. Drive /RE low to enable RO; RO is high impedance when /RE is high. Drive /RE high and DE low to enter low-power shutdown mode.
3	DE	Driver Output Enable. Drive DE high to enable driver outputs. These outputs are high impedance when DE is low. Drive /RE high and DE low to enter low-power shutdown mode.
4	DI	Driver Input. With DE high, a low on DI forces non-inverting output low and inverting output high. Similarly, a high on DI forces non-inverting output high and inverting output low.
5	GND	Ground
6	A	non-inverting Receiver Input and non-inverting Driver Output
7	B	Inverting Receiver Input and Inverting Driver Output
8	VCC	Positive Supply
