## General Description

The SN74AUP1T08DCKR-TP provides the single 2-input AND function. This device ensures a very low static and dynamic power consumption across the entire VCC range from 2.3 V to 3.6 V. The device is designed for logic-level translation applications with input switching levels that accept 1.8 V low-voltage CMOS signals, while operating from either a single 2.5 V or 3.3 V supply voltage.

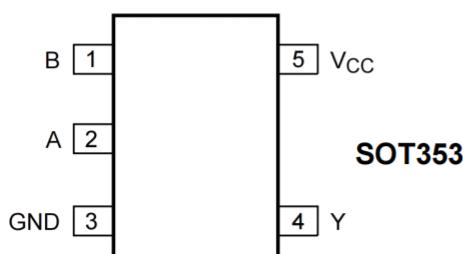

The wide supply voltage range ensures normal operation as battery voltage drops from 3.6 V to 2.3 V.

Schmitt trigger inputs make the circuit tolerant to slower input rise and fall times across the entire VCC range.
